Summary

Quality Engineering Manager with 15+ years building high-velocity test cultures across Travel (Expedia/Egencia), FinTech, and B2B SaaS (Ankorstore, Wakeo). Currently founder of **QEnabler**, an AI-driven engineering quality platform helping teams track quality maturity and surface actionable insights from test execution signals. ISTQB certified and INSEAD AI programme alumnus.

Expert in shift-left testing, end-to-end automation (Cypress, Playwright, Selenium), and BDD/Gherkin at scale. Track record of building QA functions from scratch, scaling teams up to 8 engineers, and embedding quality mindset across multi-squad organisations. Experienced in LLM evaluation (RAGAS), CI/CD pipeline integration, and DORA-aligned quality metrics that connect engineering health to business outcomes.

Experience

Founder @ VIDYANS (Creator of QEnabler) · *AI-Driven Engineering Quality Platform · SaaS · Paris*

November 2025 - Present | Paris, Ile-de-France, France

- Founded QEnabler to solve a gap in the market: engineering teams lack a unified view of quality maturity across squads, making it hard to prioritise improvements or communicate quality health to leadership.
- Designing an AI-assisted SaaS platform that aggregates test execution data, CI/CD signals, and defect trends to generate actionable quality maturity scorecards — targeting mid-size to large engineering organisations.
- Integrating LLM-based analysis to auto-surface root-cause patterns from test failures and predict defect-prone areas before release.
- Building a multi-tenant architecture designed to scale across isolated engineering org units with role-based dashboards for QA leads, VPs, and C-level stakeholders.

Technologies :

Software as a Service (SaaS) | Product Design and Development

---

QA Lead @ Wakeo · *Supply-chain Visibility SaaS · Paris*

January 2024 - October 2025 (1 year 10 months) | Paris, Ile-de-France, France

- Defined and executed Wakeo's QA strategy from the ground up, establishing the testing foundation for a fast-growing supply chain visibility SaaS product.
- Built the End-to-End testing framework from scratch using Cypress and Gherkin, integrated into the CI/CD pipeline — reducing regression cycle time and enabling continuous delivery across multiple squads.
- Designed and implemented 6 quality KPIs (defect density, escape rate, automation coverage, test effectiveness, mean time to detect, flakiness rate) used in quarterly product health reviews.
- Set up QA roadmap and OKRs aligned with product and engineering squad goals; mentored squads on shift-left testing and E2E architecture best practices.
- Led market evaluation of automation frameworks (Playwright vs Cypress vs custom tooling), driving a cost-effective and maintainable technology choice for the long term.
- Embedded a Quality Assistance culture across 3 tribes, reducing dependency on dedicated QA sign-off for low-risk releases by 40%.

Technologies :

Playwright | Cypress | Gherkin (Cucumber) | GCP | Quality Assistance | Javascript | Typescript | Docker | Github Actions | Linear | New Relic | Notion

---

QA Manager @ Ankorstore · *B2B Marketplace · Series C · €365M raised · Paris*

June 2021 - June 2023 (2 years 1 month) | Paris, Île-de-France, France

- Built the QA function from scratch at a high-growth B2B marketplace (Series C, €365M raised) — hired and scaled the team from 0 to 8 engineers in under 18 months.
- Drafted and owned Ankorstore's QA strategy, establishing quality gates across 5+ product squads and defining career frameworks for the growing QA team.
- Delivered the Cypress + Gherkin E2E framework from zero; grew the test suite to 300+ scenarios integrated into CircleCI, cutting post-release critical defects by ~25%.
- Defined quality metrics and dashboards used by engineering leadership to monitor test effectiveness, defect escape rate, and automation coverage per squad.
- Embedded a Quality Assistance model across tribes, shifting QA responsibility left and reducing reliance on late-stage manual testing.
- Conducted a structured market evaluation of automation frameworks, informing a long-term tooling strategy aligned with team skill sets and product growth trajectory.

Technologies :

Cypress | Gherkin (Cucumber) | AWS | Quality Assistance | Javascript | Docker | Github Actions | Jira | DataDog | Notion

---

Quality EM @ Egencia (Expedia Group) · *Enterprise Corporate Travel · Île-de-France*

March 2017 - June 2021 (4 years 4 months) | Île-de-France, France

- Led end-to-end quality for Egencia's corporate travel platform (an Expedia Group company serving millions of business travellers), overseeing release quality across multiple product teams.
- Managed release cycles across 3+ product lines; introduced shift-left practices and TDD that reduced regression time by ~30% via CI/CD pipeline automation (Jenkins + AWS).
- Defined and maintained quality metrics dashboards for engineering leadership, tracking defect escape rates, test effectiveness, and automation coverage on a weekly cadence.
- Managed distributed outsourcing QA teams across multiple geographies, coordinating test execution, bug triage, and daily reporting to ensure consistent quality standards across time zones.
- Drove product inception involvement to proactively surface quality risks early, reducing late-stage defect discovery and shortening overall release cycles.
- Collaborated directly with Expedia parent company stakeholders on cross-platform quality standards and third-party vendor integrations.

Technologies :

Selenium | Cucumber | AWS | Quality Assistance | Javascript | Java | Docker | Github Actions | Jira | DataDog | Confluence

---

Senior Software Engineer in Test @ Egencia

October 2014 - March 2017 (2 years 6 months) | Île-de-France, France

- Took initiative to design and deliver a visual UI regression testing tool, subsequently adopted into the core automation framework — eliminating an entire category of undetected UI regressions.
- Led the full migration of C# tests to a Cucumber Java Selenium (BDD) framework; built and mentored a team of 3 engineers, completed the project on time, and cut test maintenance overhead significantly.
- Upgraded the legacy automation framework to Cucumber Java Selenium, adding daily automated runs triggered on every service deployment — reducing manual

release sign-off time.

- Built an automated reporting and alerting mechanism that gave the team real-time visibility into test run health without manual intervention.
- Coordinated release activities across environments (deployment, test execution, team sign-off) for multiple parallel product releases.

Quality Engineer @ Vision IT Group

July 2013 - September 2014 (1 year 3 months)

- QA consultant embedded at Egencia; contributed to test plan execution and release quality for the corporate travel platform.

Consultant @ Capgemini Consulting

September 2011 - May 2013 (1 year 9 months) | France

- Front-end developer (Drupal) on the Voyages SNCF project; responsible for theme development, UAT validation, and non-regression testing.

Java Developer @ GFI Informatique

November 2010 - June 2011 (8 months)

- Java developer at BNP Paribas; bug fixing, feature development, and non-regression testing.

Web Developer (Internship) @ Risk Management (Internship)

April 2010 - September 2010 (6 months)

- Project coordinator for a micro-credit web application; requirements analysis, planning, and cross-timezone coordination with the US development team.

Consultant (Internship) @ Soft At Home (Internship)

September 2009 - November 2009 (3 months) | Nanterre, France

- Functional testing of the Orange Livebox application: test plan creation, test execution, environment setup, and log analysis.

Web Project Manager @ France India Information Technology

April 2008 - July 2009 (1 year 4 months) | Villejuif, France

- Managed an offshore development team in India (Scrum) for a web project; responsible for test strategy, non-regression testing, bug triage, and functional support.

Education

CY Cergy Paris Université

Master (M2) IUP SIGE, Génie électrique et informatique industrielle (2009-2010)

Certifications

- ISTQB
- Transforming Your Business with AI - INSEAD
- Visual Elements of User Interface Design
- Web Design: Strategy and Information Architecture
- UI/UX Design Specialization Level I Certification
- UI/UX Design Specialization Level II Certification
